

Artificial Intelligence & Machine Learning

Unleash the power of your company's data

Artificial intelligence (AI) and machine learning (ML) capabilities can add tremendous value to an organization. However, not all companies have the in-house expertise or ongoing capacity to build and support high-powered applications that return maximum value.

With ClearScale and AWS, you can deploy AI & ML at scale to automate analytics, enhance customer experiences, forecast outcomes, and much more.

Our AI/ML Services

Forecasting

Forecast future outcomes based on historical or real-time data that your company collects. Use AI and ML to help you make informed decisions related to customer churn, sales, or engagement.

Machine Vision & Pattern Detection

Deploy sophisticated algorithms that can identify relevant objects and patterns, build facial recognition programs, diagnostic scanners, and other applications that can sift through thousands of videos and images to gather valuable data points.

Personalized Recommendations

Provide tailored recommendations to customers based on their unique needs, behaviors, and preferences. Use AI and ML to identify distinct customer segments and discover untapped market opportunities.

Speech & Text Processing

Process massive amounts of speech or text data easily with AI. Develop applications that can convert speech to text, glean sentiment from voice, translate, or search for keywords.
