

# ClearScale Cloud Factory

## On-demand Specialized Cloud Support

There are numerous advantages to migrating and modernizing IT infrastructure on the Amazon Web Services (AWS) platform. However, many organizations don't have the in-house IT expertise or capacity to leverage all the cloud has to offer. It can also be difficult for some organizations to justify the time and money needed to execute long-term, intensive engagements.

To address these challenges, ClearScale designed our Cloud Factory service through which customers have access to plug-and-play cloud expertise. Enterprises can hire ClearScale's experts on an ad-hoc basis to support migrations, modernizations, DevOps implementations, and data-oriented projects.

Leverage our agile Cloud Factory squads to supplement large-scale, complex initiatives or accelerate smaller cloud implementations. Whatever your need, we can put together the ideal combination of solutions architects, designers, engineers and project managers to ensure you achieve your most important cloud goals.

## Cloud Factory Benefits

### Agile Execution

When you hire ClearScale Cloud Factory resources, you don't have to go through the typical project scoping process. Our specialized squads can plug right into existing workflows without disrupting execution momentum.

### Digital Transformation

Our collaborative Cloud Factory squads accelerate digital transformation by augmenting in-house staff and filling knowledge gaps wherever they exist. As an AWS Premier Consulting Partner, we also have access to tools and funding that make it easy to estimate costs and calculate your potential ROI for any engagement.

### Flexible Deployments

Scale Cloud Factory teams up and down as needed to meet your cloud objectives. Bring on multiple ClearScale squads simultaneously to tackle projects across different lanes or focus entirely on one area - the choice is yours.
