

We Help Companies Innovate on the AWS Cloud Platform

About ClearScale

ClearScale is an Amazon Web Services (AWS) Premier Tier Services Partner that has helped more than 500 companies - from startups to enterprises - grow, innovate, and thrive on the cloud. We're experts at designing, implementing, optimizing, and managing customized cloud solutions on AWS that drive the innovation our customers need to achieve their business transformation initiatives.

Founded in 2011

12 AWS Competencies

1,000+ Projects Completed

500+ Customers

100+ AWS certified technical staff

13+ years of AWS experience

AWS Funding Expertise

We have access to AWS funding that can help offset your project costs. As experts in AWS funding, we can maximize the amount you are eligible to receive from AWS.

Why Companies Choose ClearScale

Deep Technical Expertise

The AWS cloud is technically complex and continuously evolving. Our cloud experts not only stay up to date with the latest AWS cloud technologies, they apply their knowledge and experience to drive innovation across all stages of your cloud journey.

Deliver Customized Solutions

Our team provides a consultative approach to understand your challenges, and then architects custom solutions to achieve your goals. Along the way, we'll help you reduce operating expenses, total cost of ownership, and capital expenditures.

Enhance Business Agility

Standardize and automate critical IT processes to increase agility and accelerate development without having to hire full-time resources. We can augment your staff or take the lead to address your biggest IT challenges.

Innovate at Will

Take advantage of the latest AWS cloud technologies to expand services, create new sources of revenue, reach more customers, and enter new markets.

Accelerate Project Delivery

We have the proven flexibility and speed required to complete complex cloud computing projects on time and under budget, even in cases where other AWS partners say it can't be done.

Our Services

Application Development & Modernization

- Application Development
- Application Modernization
- Assessment & Planning
- Application Optimization

Cloud Adoption & Migration

- Cloud Readiness Assessment
- Migration Planning
- Migration Execution
- DB Migration and Modernization (Oracle, SQL)

Data Architecture & Data Engineering

- Data Lakes
- Data Pipelines
- Data Meshes
- Dashboards and Visualizations
- Big Data Solutions
- Data Analytics

Infrastructure & DevOps

- Automated Deployments
- CI/CD Pipelines
- Serverless Infrastructure
- Infrastructure as Code (IaC)
- Containerization

AI & Machine Learning

- Generative AI
- Custom Models
- MLOps

Managed Services

- 24x7x365 Monitoring and Alerts
- Auditing and Cost Optimization
- Right-sizing
- Fast Response SLAs
- Service Delivery Management
- ClearScale Squads

Customer Highlights

acoustic

Migration & Modernization

Acoustic needed to migrate and modernize workloads on AWS. This massive project involved more than 6,300 servers from 12 global data centers and 8 full-stack applications in an aggressive 10-month timeframe. As a result, Acoustic achieved significant cost savings from moving off of punitive licensing models and avoiding expensive renewal fees, and can now target the midmarket through trial subscriptions and pay-per-use billing.

"We needed to migrate to AWS and modernize our workloads to support our cloud-based marketing platform and reduce high IT costs. This was a massive project that involved more than 6,300 servers from 12 global data centers and 8 full-stack applications in an aggressive 10-month timeframe. The project was a tremendous success, thanks to our collaboration with ClearScale. They managed to complete this ambitious project on time - when other AWS consulting partners said it couldn't be done."

John Bozeman, CTO

AI & Machine Learning

PBS wanted to develop a smart recommendation engine on AWS to offer a truly personalized experience to its millions of viewers while preserving brand and content uniqueness. ClearScale set up the data operations MLOps platform that PBS needed to make high-quality recommendations to viewers. PBS now has a smart recommendation engine it can enhance and evolve further as the organization creates more experiences for its audience.

"We worked with ClearScale to help set up and configure our initial solutions and data pipelines. We needed to leverage insights faster and launch something in months rather than years. Their experts set up an AWS cloud configuration and related services for using Amazon Personalize to help save us a tremendous amount of effort and thousands of engineering hours."

Mikey Centrella, Director of Product Management

Data & Analytics

USA Baseball wanted to upgrade its data management practices and begin storing information in a scalable repository that could enable advanced analytics. ClearScale set up a data lake on AWS capable of ingesting and storing information about tens of thousands of players. USA Baseball can now perform new analyses on player data and share better insights with athletes and scouts.

"With ClearScale we now have a working data lake that allows us to put our data into a more structured cloud environment. This is going to allow us to improve our reporting processes, improve our methods of sharing data with various stakeholders, and put us into a better position to gain new insights into the data, run analytics on our data, and help players develop, while also helping the MLB scouting community better evaluate the top talent in the nation."

Russell Hatford, Senior Director of Technology
