Data & Analytics on AWS

Capture every analytical insight

In today's burgeoning tech landscape, businesses can collect more data than ever before about their customers & services. However, synthesizing massive amounts of data from various sources is challenging without the right infrastructure & capabilities.

ClearScale helps companies optimize their applications and architecture for data & analytics use cases. We have deep expertise in high-volume, high-variety, & high-velocity data lake cloud projects executed on AWS. Improve customer engagement, develop better applications, and more, by partnering with ClearScale's experts.

Data & Analytics Services

Artificial Intelligence & Machine Learning

Build AI / ML models that can process massive amounts of data to predict outcomes, drive decision-making, and evaluate company performance. Add intelligence to existing applications that improve productivity over time.

Data Pipelines

Establish serverless, predictable data pipelines with fully fledged orchestration to enable any type of ETL requirements for your business. Ingest and process data in real time, in bulk, or in batches depending on your unique applications.

Internet of Things (IoT)

Transform raw data from IoT devices into valuable insights that you can use to create new applications and offerings for your customers. Harness the potential of smart devices to monetize next-gen services and products.

Data Lakes & Warehouses

Build and manage AWS-powered data lakes that can store all of your raw intelligence from remote assets or on-premises servers. From these repositories execute analyses, query IoT data, and feed machine learning programs to create long-term value.
