

AWS Solutions for Financial Services

Enhance Scalability and Resilience with AWS

Financial services and financial technology (Fintech) companies face many challenges in the global economy. Banks, online payment processors, investment companies, and more have to maintain secure and resilient operations while scaling with huge demand. On top of that, customers expect their applications to be mobile-friendly, data rich, and intuitive at all times.

Meeting these needs in a cost-effective manner requires sophisticated cloud-based technology. Only through a platform like Amazon Web Services (AWS) can financial services and Fintech companies deliver reliable and differentiated products that comply with regulatory requirements.

In ClearScale, an AWS Premier Consulting Partner, financial services and Fintech companies have an expert cloud partner that understands how to optimize IT infrastructure on AWS to meet these essential requirements. We help clients modernize their critical systems, applications, and workloads so that they can excel in today's complex financial services world.

Services for Financial Services and Fintech Companies

Cybersecurity

Design the ideal cloud infrastructure to maintain data integrity, protect confidential information, and comply with data residency requirements and regulatory mandates. Ensure remote employees can access systems and databases securely without compromising sensitive data.

Big Data Tools

Establish secure data lakes and data pipelines to store crucial financial intelligence. Leverage AI and machine learning to process massive data volumes, uncover growth opportunities, and innovate as needed to enhance customer experiences.

Infrastructure Modernization

Modernize IT infrastructure to mitigate operational risk and lower overall technology spend with pay-as-you-go computing. Improve organizational agility with microservices architecture and serverless tools that free up IT resources to focus on higher-value activities.

About ClearScale

Over the past decade, ClearScale has helped hundreds of organizations implement custom cloud solutions on the AWS platform. Our expert team has extensive experience designing cloud architectures to help financial services companies overcome the many challenges they face.
