

# Modernize Java Applications on AWS

## Maximize Java Performance in the AWS Cloud

Enterprises worldwide use Java for mission-critical applications. Yet, many organizations haven't modernized these assets. They don't have the resources or expertise to do so without compromising daily operations. To innovate and compete at the highest level tomorrow, companies must refactor or replatform their legacy Java assets today.

ClearScale is an AWS Premier Consulting partner with extensive Java modernization experience. We employ a squad approach consisting of a principal architect, a project manager, a development lead, application developers, systems engineers, and client resources to facilitate knowledge transfer and collaboration.

With ClearScale, you can migrate and modernize your Java assets on the cloud without disruption and take full advantage of AWS, the most complete cloud platform available.

## Features and Highlights

### Landing Zone and Shared Services Foundation

Deploy a robust landing zone and shared services foundation to optimize Java app and database performance on the cloud. Leverage cloud-native AWS services to maximize the scalability and reliability of your newly modernized IT assets.

### CI/CD Pipeline Configuration

Set up an automated CI/CD pipeline to accelerate development and deployment cycles for your Java applications. Deliver innovative products and services to market faster without compromising performance or security.

### App and Database Refactoring / Replatforming

Refactor or replatform Java applications and databases that no longer perform up to par. Take advantage of serverless computing and containers, while moving to managed services and purpose-built databases.
