# Modernization Program by ClearScale and AWS

## Modernize Your Cloud Workloads to Reduce Cost and Accelerate Time to Market

Many businesses have moved essential IT infrastructure and applications over to the cloud. However, not all companies have continued to optimize their operations to take advantage of ongoing cloud innovation. They either lack the necessary technical resources or don't have the internal expertise to incorporate the latest services from Amazon Web Services (AWS).

With the help of ClearScale, an APN Premier Partner, organizations can revamp and modernize their cloud-based architecture to reduce costs, accelerate innovation and bolster security.

## Modernization on AWS - Services

### Serverless Computing

Offload burdensome infrastructure management to AWS and build new applications that are designed specifically to thrive in the cloud. Enjoy high availability for nearly every type of workload without worrying about servers.

### Autoscaling

Automatically monitor and adjust compute resources to maintain application performance at the lowest cost. Ensure your applications always have the right resources at the right time.

### Legacy Architecture Upgrade

Evaluate your current AWS infrastructure to identify immediate cost optimization and value-add opportunities. Upgrade to the latest AWS services and get the full value out of your AWS experience.

### Containers

Package your organization's software into containers that hold everything needed to execute, including code, runtime and system libraries. Ensure all of your applications can run reliably in any environment.

### Managed Services

Reduce IT operational overhead and focus staff on other projects with Managed Services for database, storage, security, data processing and analysis, and machine learning services
