

AWS Solutions for Nonprofit Organizations

Maximize Your Impact with AWS

Nonprofit organizations (NPOs) are sometimes held back by inflexible IT infrastructure, inefficient data practices, and other technology-related challenges. At the same time, these organizations are under pressure to use donor contributions wisely. That can make it difficult to invest in back-end systems, including IT.

With a leading cloud provider like Amazon Web Services (AWS), nonprofits don't have to choose between advancing their missions and controlling technology expenses. Instead, they can increase the impact of their work by taking advantage of cost-efficient and powerful cloud-native tools.

As an AWS Premier Consulting Partner with the Nonprofit Competency, ClearScale can help nonprofits make the most of their cloud investments and steward resources wisely. AWS also offers credit and grant programs to help these organizations cover their costs so that they can serve more people.

Nonprofit Organization Services

Application Development

Develop resilient and scalable applications, including mobile-friendly apps, that serve constituents based on the organization's mission. Enhance fundraising effectiveness by designing intuitive frontend interfaces that deliver higher-quality experiences every step of the way.

Big Data Tools

Leverage Big Data analytics to improve program effectiveness and donor engagement. Easily deploy machine learning algorithms to advance research initiatives and configure efficient data pipelines to improve data quality and get real-time insights from data.

Migration

Migrate the IT environment to AWS to increase business agility and optimize IT costs. Move to a modern platform that is as secure, productive, and efficient as possible.
