

ClearScale Squads: A Hybrid Delivery Model

Revolutionizing AWS Cloud Project Execution

Organizations often grapple with the complexities of cloud project management, technical staff augmentation, and the daunting task of scaling their IT operations. Enter ClearScale Squads, a solution designed to address these issues head-on.

ClearScale Squads leverage a fractional engineering model that offers a flexible and scalable approach to AWS cloud project management. ClearScale Squads stand out by providing multiple tiered buckets of hours within an Agile delivery framework. The program is suitable for a range of customers, from enterprises that need additional cloud resources to rapidly growing SMBs and startups where reactionary staff augmentation is insufficient.

With a requirement for just a 4-month initial commitment followed by a flexible month-to-month agreement, ClearScale Squads offer a structured yet adaptable path to scaling resources and executing cloud projects. This approach allows companies to start at a low tier and gradually ramp up to a steady state, with the ability to shift focus areas with only a 30-day notice.

ClearScale Squads Core Infrastructure

- Cloud Migrations
- Disaster Recovery
- Cloud Cost Optimization
- Cloud Infrastructure Security
- DevOps and Automation
- Cloud Performance Tuning/Measurement
- Infrastructure Build/IaC
- Application Operations

ClearScale Squad Key Differentiators

Application Layer Focus

Application Development

ClearScale Squads can help you design, develop, and deploy a reliable and scalable application that runs on the AWS cloud.

Application Modernization

ClearScale Squads can help you modernize your legacy applications into high-performing, scalable, and resilient cloud-native applications that create value and keep your customers happy.

Data Layer Focus

Data Architecture

ClearScale Squads can help you design and build a specific data architecture on AWS that may include data lakes, data ingestion pipelines, data warehouses, data marts, and data migration tools.

Data Engineering

ClearScale Squads can help you set up data engineering initiatives like data processing (e.g., cleaning, categorizing, labeling, etc.), data analytics, and data visualization.
