

ClearScale and Stream Security

Continuous Compliance and Real-Time Visibility Into AWS Environments

Managing AWS cloud security and compliance is challenging, with frequent audits and a deluge of security alerts often overwhelming IT teams.

The strategic partnership between ClearScale and Stream Security moves beyond the limitations of traditional security tools that rely on periodic scans. This integrated solution moves businesses from point and time compliance validation to continuous compliance, shifting security and compliance from reactive measures to a proactive stance.

Our approach elevates cloud cost visibility, equipping IT teams with actionable insights to fine-tune AWS configurations for optimal cost efficiency. By shifting from static, point-in-time data to continuous, real-

time analytics, we enable swift identification of compliance and security discrepancies, coupled with cost visibility and prioritized strategies for remediation.

Stream Security's real-time data analysis cuts through the noise of false positives that burden traditional scanning tools, addressing alert fatigue head-on. This precision allows security teams to focus on genuine threats and compliance issues, cultivating a more secure and streamlined cloud ecosystem.

The outcome is a suite of indispensable tools that empower organizations to achieve continuous compliance, improved cost visibility, and cutting-edge cloud security in their AWS environments.

Customer Benefits

Ready for Audits Anytime

With continuous compliance monitoring and real-time security assessments, your organization is always prepared for audits, eliminating the need for extensive preparations for every audit.

Enhanced Cost Visibility and Optimization

Gain actionable insights into your AWS spending with detailed analytics, enabling precise cost management and optimization strategies for your cloud infrastructure.

Immediate Threat Detection and Remediation

Leverage advanced real-time analytics to quickly identify and address security vulnerabilities and compliance gaps, significantly reducing the risk of exposure and the time to remediate.

Eliminate False Positives

Our sophisticated analysis filters out the noise of false alerts, allowing your security team to focus on genuine threats and compliance issues.

Continuous Compliance and Security

Ensure your cloud environment is in continuous compliance with regulatory standards and secure from threats through real-time monitoring and detection.

Enhance Your MSP Service

Perform checks and balances on your MSP vendor, ensuring that it's always aligned with the latest regulatory compliance standards, security protocols, and cost-efficiency practices.

Our Services

Continuous Compliance Monitoring & Management

Ensure that your AWS environment adheres to standards like PCI DSS, HIPAA, SOC, and more, even when you're not undergoing an audit. Benefit from ongoing compliance checks and updates that keep pace with changing regulations.

Real-Time Security & Threat Detection

We provide instant visibility into your exposure level, pinpoint threat origins, and clarify remediation impacts, reducing the mean time to remediation.

Cloud Cost Visibility & Financial Forecasting

By analyzing usage patterns and identifying inefficiencies, we provide actionable recommendations for cost optimization and help forecast future spending, ensuring you get the most out of your AWS cloud investment.

Customized AWS Environment Health Checks

We assess your cloud setup to identify potential issues, from security vulnerabilities to operational inefficiencies, and provide a roadmap for optimization, ensuring personalized solutions for your AWS environment.

About ClearScale

Founded in 2011, ClearScale provides cloud-native solutions designed exclusively for Amazon Web Services (AWS). Our cloud experts have helped companies across all industries design, implement, optimize, and manage customized cloud solutions that drive innovation.

About Stream Security

Stream Security is a leading platform for cloud solutions specializing in real-time Cloud Twin technology. The platform constantly models enterprises' cloud environments to pinpoint how threats emerge and demystifies the impact of remediating them instantly. To learn more visit stream.security.
