

Advanced AWS-native Security Information and Event Management (SIEM) System

A centralized AWS-based Security Information and Event Management (SIEM) system gives you control of security operations, improves your cloud security posture, and provides a one-stop-shop for your security monitoring and incident response.

Organizations require in-depth visibility into the security of their AWS cloud infrastructure and applications. Achieving this high level of visibility requires the collection of logs and audit trails and the reservation of these logs for analysis and reporting.

A centralized AWS-based SIEM enables control of security operations, better visibility into the cloud security posture, and a one-stop-shop for all security monitoring and incident response needs, not to mention that it'll help you pass security audits as well.

ClearScale offers a solution based on AWS Security Hub and Amazon OpenSearch services. This solution empowers security analysts and security operations teams with the visibility, automation, and insights needed to quickly detect anomalies and uncover advanced threats in real-time.

SIEM Benefits

Improve Cloud Security Posture Management (CSPM)

Reduce your risk with automated checks based on a collection of security controls curated by experts and simplify regulatory compliance management with built in mapping capabilities for common frameworks like CIS, PCI DSS, and more.

Initiate Security Orchestration, Automation, and Response (SOAR) workflows

Automatically enrich findings, remediate them, or send them to ticketing systems through AWS Security Hub's integration with Amazon EventBridge.

Cost optimized and elastic SIEM

Utilize UltraWarm Amazon OpenSearch nodes, Amazon S3, and a sophisticated caching solution to improve performance and increase cost-effectiveness.

Meet regulatory compliance requirements

Regulatory compliance mandates like SOC2, HIPAA, PCI DSS and others require the logging of security data as a key control. SIEMs fulfill this role by easing the attestation process with pre-set compliance reporting templates.

- ▶ Quickly detect anomalies and uncover advanced threats in real-time in your AWS environment.
